

Any weigh you like from  
0.1 g to 300 kg:  
compact Sartorius QC Scales.

**SPEED UP** TECHNOLOGY

Sartorius AG, Weighing Technology

**sartorius**

# Forget "special" scales. The Sartorius QC can do it all.

## SPEED UP technology for super-fast, reliable results!

At an unequalled pace of productivity! Sartorius QC industrial scales feature advanced technical standards. For quality in your work – and easy operation. Rugged, dependable, user-friendly.

**CE** conformity for industrial environments  
EN50081 EMC Limitation of emissions Parts 1+2  
EN50082 EMC Defined immunity Parts 1+2  
to interference

## Powerful technology is worth even more if it is easy to use and fast.

The entire QC display unit has been designed so that every application program is easy to start. Even the inexperienced user will have no trouble obtaining error-free results right away. The display unit has a row of blue color-coded keys for controlling the scale's basic functions. Located above this row are keys for totalizing, checkweighing and taring. Moreover, you can store values in up to 25 product memories and enter customized designations for your printouts.

Rounding off the display unit's ergonomic keypad are numeric keys that enable you to assign and recall product memory data and tare values or IDs for your printouts. And since not everyone weighs, counts, checkweighs or totalizes the same thing in the same manner, the particular keys that are "unimportant" to you can be covered by keypad overlays that highlight the "important" keys or even block certain keys to prevent operating errors.

The Sartorius QC is the right decision if you want to

- weigh
- count
- checkweigh
- formulate or weigh recipes
- fill
- totalize
- print
- toggle units
- or
- store data

\* Kit for raised display mounting included in the standard equipment supplied

\*\* Display can be detached from scale platform by disconnecting plug-in cable

# Access the application program you need at the single touch of a key.

## More speed.

Every QC scale has an automatic container taring function, which eliminates the need for retaring every time you change the container. This makes any weighing or counting operation faster than ever before, saving you valuable time and money. The keys are color-coded, clearly identified by easy-to-understand symbols, and provide positive click action so you will always "feel the punch" even when wearing thick industrial gloves. The keys are logically arranged according to the anticipated frequency of their use.

## Everything at a glance.

Just turn on the power, and the QC scale will guide you throughout the entire operation. A message will prompt you, whenever necessary, for example, when you need to set the tolerance limits. Symbols keep you informed as to which application program is selected at any given moment. That way, every operator will always know what is going on, no matter how frequently your work shifts change. The QC's backlit, high-contrast display provides clear readouts even in dimly lit aisles and production areas.

## High resolution, high reading accuracy.

The QC's high internal resolution makes the scale more efficient than ever before and eliminates the uncertainty of rounding errors. As a result, the QC helps assure the high quality of your products.

## Always the right scale.

With a selection of 12 QC models in various platform sizes and versions, one of these scales is bound to be the right one for your specific requirements.

Our extensive array of accessories further enhances the versatility of the QC scales, giving you the flexibility you need: choose from a data printer, red/green/red display for fast product grading, a rechargeable

battery pack for long operation independent of an AC power outlet, and more.

## Built as strong as an ox.

QC scales are built as "strong as an ox" to stand up to tough punishment in industrial environments. The scales feature IP65 protection. Jolts, vibration and overload won't affect them.

For use in wet areas, some QC scales are available with stainless steel platforms (AISI 304).

## Energy-saving.

You can set any QC scale so that it will shut off automatically when the weighing platform has not been loaded for a defined period. This saves energy costs and increases the life of your batteries during operation on the move.

## PC-compatible.

The interface port and the remote-control mode allow every QC scale to be easily connected to a PC or integrated into a data management system. Alternatively, you can plug a printer into the QC. For generating these printouts, the QC scale enables you to customize header lines. For instance, you can use two lines to enter your company's name and another line to designate a particular job.

Accessories		Order no.
Adapter cable	3 m; round connector to RS-232, 25-pin D-Submini port; for connecting the scale to Sartorius accessories (standard MP8/MC1 interface)	YCC01-0016M3
Interface cable	5 m; round connector on scale to 25-pin D-Submini port on a PC	YCC01-03ISM5
PC adapter cable	5 m; round connector on scale to 9-contact port on a PC	YCC01-09ISM5
Interface cable	for connecting the QC scale to an isi terminal	YCC01-04ISM3
Extension cable	6 m; round male connector to round female connector	YCC01-01ISM6
Round male connector	12-pin; for customizing own cables (IP65)	69QC0010
AC adapter (benchtop design)	3-m primary cable; 1.5-m secondary cable, IP65 protection	
	220 V	6971899
	110 V	6971500
Description Cables and Connectors	Y-cable for simultaneous connection of control devices (4 out, 1 in) and devices with RS-232C serial interfaces	YTC02CC1M1
	Y-cable for simultaneous connection of a printer or PC and a bar code scanner or reference balance/scale	YTC02PB1M1
	Bar code scanner (requires separate AC adapter)	YBR02IS
	Power supply (AC adapter)	6971967
Display holder	for benchtop or wall mounting (for QC7DCE, QC15, QC35 and QC 65 scales)	YDH03EA
Display holder	for benchtop or wall mounting (for QC7CCE-SOCE and QC64EDE-SOCE scales)	YDH01TS
Display column	for -DCE and -EDE models (raised display mounting on the scale platform, 325 mm)	YDH01EA
Display column	for -EDE models (raised display mounting on the scale platform, 500 mm)	YDH02EA
Display column	for -FEG models (raised display mounting on the scale platform, 750 mm)	YDH04EA
Floor stand	height: 1.2 m (for display unit); black, painted	6096
Floor stand	height: 1.1 m (for display unit); stainless steel AISI 304	YDH03IS
External checkweighing display	with red/green/red indicators; for checkweighing or for use as a guide for filling; with 12-pin round connector	YRD14Z*
Dust cover	with pockets for insertable cards (spare)	6960IB01
Data printer	with date, time and statistics program (YCC01-0016M3 required)	YDP03-OCE
	5 rolls of paper, each 50 m, for data printer	6906937
	ink ribbon cassette for data printer	6906918
Bar code label and strip printer, verifiable for use in legal metrology	with connecting cable and external AC adapter	YDP04IS-OCEV220
	3 rolls of heat-sensitive paper for YDP04IS-OCE, 60 mm x 75 m	69Y03090
	Labels for YDP04IS-OCE small, 56 mm x 30 mm, quantity: 1,135	69Y03092
	medium, 56 mm x 76 mm, quantity: 500	69Y03093
